Construction Products

2009 edition

*Colours - your design,
your choice.*

Auckland Airport arrivals hall. 2008. White resin with marble and crushed mirror glass.

Architectural Terrazzite

A thin set (6mm) synthetic resin bound Terrazzo floor finish featuring a colour resin base and numerous aggregate types. The final effect is determined by both the resin base colour and the choice of #1 Marble chips. This offers the designer an unlimited choice of colour, chip appearance and overall layout.

The floor may be laid with colour patterns, borders, metal (brass) dividing strips or in any effect required.

Colours

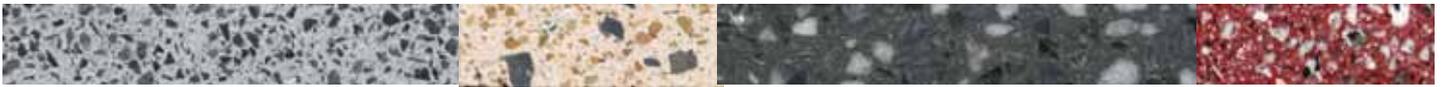

- Only a selection of colours shown; use any colour chart
- Nuplex can match any base resin colour.
- Caution: The marble aggregates do change the colour effect of the combined mixture.

Notes to the Architect: Samples : Choose the sample that best represents your requirements (or suggest changes) and email us for a new, hard sample. (We can also email you much higher resolution scans of any image on these pages.) Choose the information requester from our homepage. Our sample database records the resin colour and the size, mix and quantity of the marble aggregate types.

Environmental rating:

Architectural Terrazzo is supplied in two forms:

Standard and ZV versions. Both emit, on curing, less than one gram / ltr of emitted materials. These therefore are both considered to comply with Green Star or LEEDS systems for a star for applied coatings for low emission of solvents.

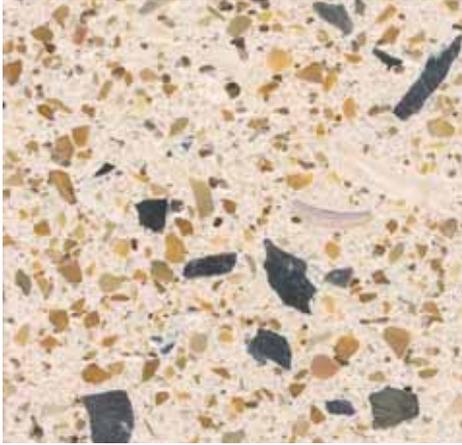

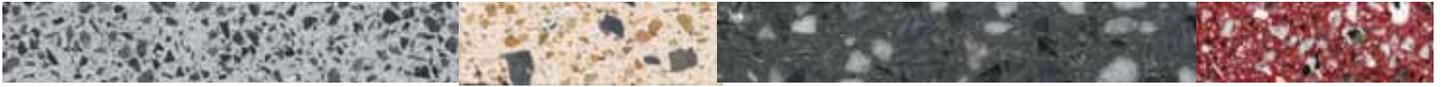

The standard version has an odour during application (but still emits far less than 1gram/litre). The ZV (zero VOC or zero volatile organic compounds) has no odour during installation.

This latter system would have enhanced ratings for lower workplace impact.

These resins are made in New Zealand.

The resin is mixed on site with NZ sourced marble aggregates. Around 80% of the system is marble aggregate and only 20% resin.
